Chapter 1

Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

gqp_placer	
General Quadratic Placer	7

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Exception	
gqp_placer.MyError	10
gqp_placer.mothercore	9

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

gqp_placer.mothercore	9
gqp_placer.MyError	10

Chapter 4

Namespace Documentation

4.1 gqp_placer Namespace Reference

General Quadratic Placer.

Classes

- class [mothercore](#)
- class [MyError](#)

Functions

- def [create](#) (filename)
Creates the "mothercore" class from file.
- def [solveforx](#) (core)
Solves the given core for locations of gates.
- def [writeback](#) (core, filename)
Read and write back to given filename.
- def [assign](#) (core, G, hORv, IORr)
Sorts the gates from the given core according to hORv and IORr 1 horizontal sort, then 1 vertical sort if needed.
- def [update_coordinates](#) (coordinate, side)
Updates the coordinate according to bounding box.
- def [update_location](#) (core, x, y, key)
Updates the location values given in the class.
- def [containNrun](#) (core, side, hORv, IORr)
Contains half the gates in core within the bounding box and solves for gate locations.
- def [place](#) (core, side, n)
Iterative Placer.
- def [main](#) ()
Main.

4.1.1 Detailed Description

General Quadratic Placer.

Chapter 5

Class Documentation

5.1 gqp_placer.mothercore Class Reference

Public Member Functions

- def `__init__` (self, `side`)
The constructor.
- def `get_numG` (self)
Helper function to return the number of gates.
- def `get_numP` (self)
Helper function to return the number of pads.
- def `get_numN` (self)
Helper function to return the number of nets.
- def `set_side` (self, `side`)
Helper function to set the side variable.
- def `get_gate` (self)
Helper function to return a dictionary of gates.
- def `get_gateconnections` (self, `gatenum`)
Helper function which returns the connections of given gate.
- def `get_gatelocation` (self, `gatenum`)
- def `get_pad` (self)
- def `get_padlocation` (self, `padnum`)
- def `add_gate` (self, `gatenum`, `listofconnections`)
- def `add_pad` (self, `padnum`, `netandlocation`)
- def `add_net` (self, `netnum`, `connection`, `gateorpad`)
- def `add_netconns` (self, `netnum`, `listofconnections`)
- def `get_otherconns` (self, `netnum`, `gatenum`)
- def `get_nets` (self)
- def `add_location` (self, `x`, `y`, `data`)
- def `add_sorted` (self, `sort`)
Helper function to add a sorted list of gates.
- def `get_sorted` (self)
- def `get_location` (self)

Public Attributes

- [gate](#)
Dictionary of gates.
- [pad](#)
Dictionary of pads.
- [numG](#)
Number of gates.
- [numP](#)
Number of pads.
- [numN](#)
Number of nets.
- [side](#)
List of 4 elements storing grid limits [xmin, xmax, ymin, ymax].
- [gateX](#)
Dictionary of X coordinates.
- [gateY](#)
Dictionary of Y coordinates.
- [nets](#)
Dictionary of nets.
- [sortedgate](#)
List of sorted gates.

5.1.1 Constructor & Destructor Documentation

5.1.1.1 `def gqp_placer.mothercore.__init__(self, side)`

The constructor.

5.1.2 Member Function Documentation

5.1.2.1 `def gqp_placer.mothercore.get_numG(self)`

Helper function to return the number of gates.

The documentation for this class was generated from the following file:

- `gqp_placer.py`

5.2 `gqp_placer.MyError` Class Reference

Inheritance diagram for `gqp_placer.MyError`:

Public Member Functions

- `def __init__(self, value)`
The constructor.

Public Attributes

- **value**

5.2.1 Constructor & Destructor Documentation

5.2.1.1 `def gqp_placer.MyError.__init__(self, value)`

The constructor.

The documentation for this class was generated from the following file:

- `gqp_placer.py`
